

## Amino Acids in Human Plasma on Raptor Polar X

- Separates leucine/isoleucine/alloisoleucine and alanine/sarcosine isomers.
- Simple sample preparation without derivatization.
- Fast chromatographic cycling time.

<b>Sample Preparation</b>	An aliquot of 50 μL of plasma (Control Plasma Level II, Chromsystems) was mixed with 5 μL of 30% sulfosalicylic acid solution for protein precipitation. Following centrifugation at 4200 rpm for 10 minutes, a 27.5 μL aliquot of clear supernatant was mixed with 2 μL of internal standard working solution and 225 μL of mobile phase B prior to LC-MS/MS analysis.
